UNLEASHING FULL MEASURING POWER

Hilti Pulse Power

Unique measuring performance

Extremely fast. Extremely reliable.

Forget what you know about measuring technologies.

Hilti Pulse Power works with up to 1 million impulses per second allowing for highly reliable readings even under the most difficult conditions.

Pulse Power is yet another demonstration of Hilti's Innovative ability and foresight. The challenge of achieving even greater reliability and efficiency in various measuring and alignment tasks has been met very convincingly. The advantages of Hilti Pulse Power are now available with a comprehensive product portfolio. Hilt, once more, impressively substantiates the power of innovation.

PULSE III POWER

Rotating Lasers

Catch the Beam in one pass

On a bright, sunny day, the task of transferring reference heights over moderate distances can often become a tedious process due to difficulty in locating the rotating laser beam. Not with Hilti Pulse Power! Thanks to the high-frequency pulses of the laser beam, a single pass of the rotating laser beam over the receiver is all that is needed for immediate location of the line.

Line and Combilasers

Visibility without compromise

The Hilti PM 2-L line laser and the PM 4-M and the PM 40-MG multi-line laser feature outstanding visibility of the lines they project whether working with or without receiver.

Range Meters

Top measuring performance

Thanks to Hilti Pulse Power, accurate, reliable readings can now be taken even under the most unfavorable conditions such as in bright sunlight. Hilti Pulse Power makes trouble-free measurements of distances up to 100 meters possible without need for a target plate-overachieved efficiently with only one person.

Detection Systems

Trustworthy detection

For the objects distributed under the wall, it's not always as "neat" as expected. With Pulse Power, more than 1000 pulses are excited from the detector, so that more signals can be collected for calculation, which results in highest accuracy and reliable object detection.

ADVANCED CORDLESS TECHNOLO- GY OF NEW 22V BATTERIES

SUB-ZERO ENVIRONMENTS

The Low Temperature Module (LTM) allows for dynamic voltage regulation at sub-zero temperatures to deliver the same level of power and runtime as they would in warmer temperatures.

HIGHER, RELIABLE OUTPUT

Placing a double tap on each cell allows our tools to handle larger loads and ensures that the power delivery in each trigger pull is always consistent, helping you do your job faster and right at the first time.

WATER AND DUST RESISTANT

Our electronics are fully sealed against moisture, water and dust, to ensure your tools keep working with you in the harshest conditions.

LONGER LASTING

This is our longest lasting 22V battery ever. We've incorporated higher density cells and built smarter software that individually monitors and controls each cell for protection against overheat and to provide optimal performance & charging.

MULTIPLE TOOL CONNECTIONS

We've built our new batteries to be compatible with all of our tools and chargers across the platform, reducing your inventory and optimizing your tool / battery fleet.

EASY TO MONITOR

With 4 LED state-of-charge indicators, workers will never be surprised with an empty pack.

QUICK CHARGING

A cooler battery charges faster and delivers power longer. We've built in the maximum number of cooling slots to protect against overheat and allow quicker charging with our intelligent charging solution.

DROP AND IMPACT RESISTANT

Redesigned cage and cell positioning provide extreme protection against drops and impact, ensuring your tools are as tough as any jobsite and able to finish the job without interruption.

HILTI COMBIHAMMERS

One Man. One Tool.

Hilti combihammer systems benefit from almost fifty years of experience in tool research, development and production in our own facilities. We pride ourselves in knowing the needs of our products' end users while incorporating technological know-how and providing a level of quality second to none. With Hilti, you can choose from a range of service packages designed to give peace of mind while saving considerable costs over the tool's lifecycle.

SIMPLY BETTER BUILT

Hilti combihammers are designed in the way they are because we have known all about users and their applications for decades. Our clear focus on the best performance-to-weight ratio can be seen in the well thought-out design and top quality of all the components.

IT PAYS TO PLAY SAFE

Hilti combihammers' impressive state-of-the-art safety features, coupled with Hilti's "built to last" promise means low failure rates and long service intervals. For the demanding professional onsite as well as their offsite counterpart, these benefits add -up to higher productivity and significant cost savings over the life of the product.

ACTIVE TORQUE CONTROL

Greater safety thanks to automatic cut-out.

Sensors detect sudden, uncontrolled rotation of the combihammer, such as when the drill bit sticks. The gearing and motor are decoupled automatically in a fraction of a second. The power tool switches itself off.

ACTIVE VIBRATION REDUCTION

Up to 2/3 lower vibration.

AVR provides effective protection from the consequences of long-term exposure to vibration. As the tool is less tiring to work with it also increases daily productivity and allows longer permissible switched-on working times.

ACTIVE TORQUE CONTROL

Putting an end to dust.

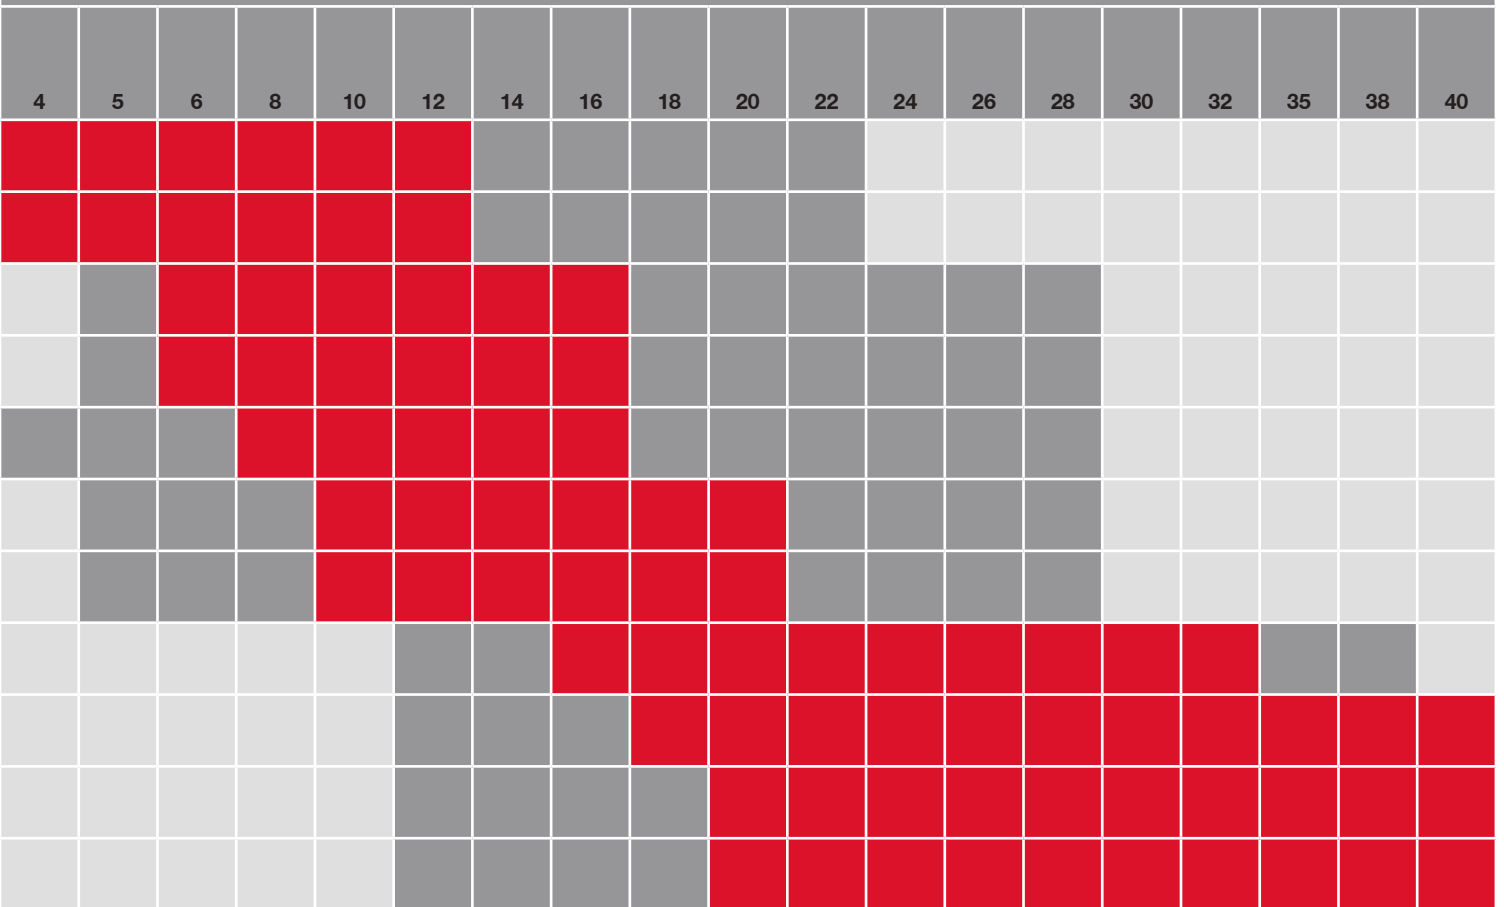

Dust not only shortens the life of power tools and accessories such as drill bits and chisels, it also has a negative effect on power tool performance and on the productivity achieved by the operator. Hilti DRS Dust Removal Systems are capable of reducing dust emissions by up to 99 percent.

TOTAL PERFORMANCE

More than the sum of its parts

Hilti power tools and equipment are developed side-by-side and are perfectly matched. This provides users with the best possible service life and productivity.

Count on Hilti.

HAMMER DRILL BITS TE-YX / TE-Y

Drilling holes Ø 12–40 mm for chemical anchors, post-installed rebar connections, medium and heavyduty anchors and through holes:

- Solid carbide and 4 cutting edges (TE-YX 12-32mm)
- Solid carbide and 6 cutting edges (TE-YX 35-40mm)
- Carbide plate tip and 2 cutting edges (TE-Y)
- 4-way helix (TE-YX) / 2-way helix (TE-Y)

HOLLOW DRILL BITS TE-YD

Drilling holes Ø 16–32 mm/up to 1 mtr working length for chemical anchors and post-installed rebar connections. TE-YD hollow drill bits make subsequent hole cleaning completely unnecessary thanks to automatic cleaning solution:

- Full carbide head embedded into the tube.
- Hollow tube for dust transportation.
- Red adapter for connection to the vacuum cleaner.

PERCUSSION CORE BITS TE-Y BK

Dry coring Ø 45–150 mm and socket cutting into non-reinforced concrete and masonry provided by:

- New design enabling up to 30% more lifetime to competition.
- Ideal carbide position for easy core disposal.
- Dust free drilling with DRS system.

BELL-SHAPED BREACH BITS TE-Y GB

Effective through hole drilling Ø 40–80 mm into non-reinforced concrete and masonry:

- Carbide-tipped ring cutting head with centering pin.
- Helix over the full working length.
- Two part design for easy servicing.

POLYGON CHISELS TE-Y

Demolition, corrective chiseling, openings, smoothing concrete surfaces after pouring concrete and many other applications with Polygon chisel portfolio:

- Self sharpening effect.
- Reduced sticking and better breaking effect.
- Rubber cup protects tool chuck from dust.

Hammer drill bit TE-CX

APPLICATIONS

- Drilling holes for metal anchors in reinforced and unreinforced concrete
- Drilling holes for post-installed rebar connections
- Drilling through-holes for pipes and cables

ADVANTAGES

- New solid carbide head for less wear and more holes with the accuracy required for setting anchors
- The indicator mark at the head verifies suitability for setting anchors as long as the mark is visible
- Solid carbide head with four carbide cutting edges in innovative X-geometry for optimum material removal

Solid carbide head

The solid carbide head with 4 cutting edges in innovative X-design ensures optimum hole-starting characteristics and prevents catching and jamming on rebars.

Wear mark

The anchor suitability indicator on the head helps ensure trouble-free anchor installation – the holes are accurate so long as the wear mark is visible. In the unlikely event of breakage, the drill bit will be replaced so long as the wearmark on the helix is still visible.

New helix design

Each of the four carbide cutting edges leads into its own helical flute for more efficient removal of dust and fragments and thus faster drilling progress.

Hammer drill bit TE-YX

SDS max

APPLICATIONS

- Easy drilling in hard-to-access locations for mechanical and electrical installation
- Reinforcing foundations of older buildings during renovation
- Installing rebar in bridges and tunnels

ADVANTAGES

- Solid carbide head for top performance, maximum reliability and less jamming when hitting rebar
- Heat-treated flute for less wear, ductile core for robustness
- Drill bit head embedded on four sides for maximum durability and longer life

Solid carbide head

The solid carbide head with 4 cutting edges in innovative X-design ensures optimum hole-starting characteristics and prevents catching and jamming on rebars.

Wear mark

The anchor suitability indicator on the head helps ensure trouble-free anchor installation – the holes are accurate so long as the wear mark is visible. In the unlikely event of breakage, the drill bit will be replaced so long as the wearmark on the helix is still visible.

New helix design

Each of the four carbide cutting edges leads into its own helical flute for more efficient removal of dust and fragments and thus faster drilling progress.

Application Procedures

Using a Hilti DX 450 SCT tool, ten threaded studs are driven into the young concrete with a precisely defined driving force.

The threaded stud's depth of penetration-directly influenced by the strength of the concrete-can be accurately measured.

The Hilti Tester Mark 5 allows accurate measurement of the force required to pull threaded studs out of the concrete.

The calibration curve provides an accurate reading of early concrete strength.

HILTI SAFE^{SET} TECHNOLOGY

A small step for engineers.
And a giant leap forward for your next design.

Now you can design anchor rod and post-installed rebar connections with more confidence. Inadequately cleaning holes during installation can reduce the performance of conventional chemical anchor systems significantly. Hilti **SAFE^{SET}** Technology eliminates this factor almost entirely – in both cracked or uncracked concrete and with anchor rods or post-installed rebar.

APPLICATIONS

- Post-installed rebar connections for concrete slab, column or wall extensions
- Heavy-duty anchoring in cracked or uncracked concrete, e.g. for steel beams, column

WHAT IS SAFE^{SET}

Hilti **SAFE^{SET}** Technology eliminates the most load-affecting and time-consuming step in the installation process: cleaning the hole before injection of the adhesive. As a consequence, engineers can now have peace of mind because the specified application will perform on the jobsite as it has been designed in the plan.

INTRODUCING HILTI SAFESET TECHNOLOGY

Once in a blue moon, something comes along with the power to accelerate the way you work.

SAFESET

SAFEset is a registered trade mark of Hilti.

1 ZERO CLEANING SOLUTION. HIT-Z anchor rods + HIT-HY 200-R

The new Hilti HIT-Z anchor rod works as a torque-controlled bonded anchor. Because of their unique shape, HIT-Z anchor rods, used in hammer-drilled holes in dry or water-saturated concrete above 5°C, are not affected by uncleaned holes. The benefits are clear: fewer steps and more productivity in anchoring applications.

Hilti **SAFESET** Technology
Up to 60% faster!

Anchor diameter range	M8 to M20
Material	Carbon or stainless steel (A4)
Embedment depth	Up to 12 times rod diameter
Concrete compressive strengths	C20/25 to C50/60
Installation temperature range	5°C to 40°C

2 AUTO-CLEANING SOLUTION. Hollow drill bits + HIT-HY 200-R / HIT-RE 100 / HIT-RE 500 V3

Hilti TE-CD and TE-YD hollow drill bits, in conjunction with HIT-HY 200-R, HIT-RE 100 or HIT-RE 500 V3, make subsequent hole cleaning completely unnecessary. Dust is removed by the Hilti vacuum system while drilling is in progress for faster drilling and a virtually dustless working environment.

Hilti **SAFESET** Technology
Up to 60% faster!

Rebar diameter range	Y8 to Y25
Threaded rod diameters	M10 to M30
Embedment depth	Up to 1000 mm
Concrete compressive strengths	C20/25 to C50/60
Installation temperature range	-10°C to 40°C

3 CONVENTIONAL SOLUTION. Brush and blow

Another option is to continue using the traditional hole cleaning method with any Hilti HIT system for superior performance.

*Cleaning Sequence when using manual dust pump are : blow twice , brush twice , blow twice.

Rebar diameter range	Y8 to Y40
Threaded rod diameters	M8 to M39
Embedment depth	Up to 20 times element diameter
Concrete compressive strengths	C20/25 to C50/60
Installation temperature range	-10°C to 40°C

Undercut anchor HDA-T

BASE MATERIALS

- Concrete (cracked)
- Concrete (uncracked)

APPLICATIONS

- Safety-relevant, heavy-duty fastenings for all dynamic loading (shock, seismic and fatigue) in cracked or uncracked concrete, including applications in nuclear power plants
- Fastenings to support heavy pipes, safety barriers, industrial machines, crane rails, dorm structures, crash barriers, roof fixings, elevator tracks, bridge retrofitting etc.

ADVANTAGES

- Self-undercutting facilitates fast and reliable installation without the need for a separate undercutting tool or additional operations
- Combines the advantages of a post-installed mechanical anchor, i.e. flexibility and immediate loading, with the performance of a cast-in-place headed stud
- Close spacing and small edge distance thanks to low expansion forces

Safety anchor HSC-A (Externally threaded)

BASE MATERIALS

- Concrete (cracked)
- Concrete (uncracked)

APPLICATIONS

- Safety-relevant, medium-duty fastenings in cracked or uncracked concrete, especially where shallow embedment and/or small edge distance or close spacing is required
- Examples: stair hand rails, sprinkler pipes, air ducts, seating, facade substructures, car park barriers, etc.

ADVANTAGES

- Shallow embedment depth for thin concrete slabs or where permissible drilling depth is limited
- Combines high working loads with small edge distances and close spacing thanks to very low expansion forces
- Self-undercutting facilitates fast and reliable installation - no separate undercutting tool or handling needed

Technical data

Material composition	(Galvanized) Bolt: steel, 8.8 grade, zinc-plated (min. 5 µm); (Stainless steel) Steel, A4(SS316)
Head configuration	Externally threaded
Type of fastening	Pre-fastening

Problem

The illustration on the left indicates a range of typical problems facing the designer.

Construction may consist of:

- concrete
- concrete block
- wood
- gypsum

The problem areas are:

- 1** Movement joints
- 2** Rigid or low movement joints
- 3** Head of wall and perimeter joints
- 4** Metal
- 5** Plastic pipes
- 6** Multiple penetrations, pipes and/or cables
- 7** Cable trays (with permanent sealing of opening during construction, or temporary sealing allowing additional cables to be installed subsequently)
- 8** Cable trays (with permanent sealing of opening during construction)
- 9** Cables (single or bundled)
- 10** Electrical boxes
- 11** Heating/ventilation/air conditioning

Fire resistance rating

To help prevent the rapid spread of fire within a building, certain walls, floors and joints are required to meet a specific fire resistance rating — the period of time during which a building component has been tested to confine a fire or continue to perform a structural function or both. Through-penetrations and joints created during the construction process require the installation of firestop systems in order to bring the wall or floor back up to its or original fire-rating.

Firestopping

It is essential that every penetration or joint in a fire-rated wall or floor is adequately protected by sealing — or “firestopping” — such that the building component is restored to its original fire-rated condition in order to maintain compartmentalization. The quality and excellence of Hilti Firestop Products help ensure that fire, smoke and toxic gases are contained to reduce the tragic loss of human life and damage to property.

* Fire resistance test reports / approvals / certificates normally do not contain any information on the service life of a firestop product / assembly. By carrying out own additional ageing tests which simulate extreme temperature / humidity conditions, Hilti provides its customers with a very high level information on product reliability and service life expectancy of the Hilti firestop systems. On the basis of the ageing cycles obtained in these test procedures as well as of experience gained in the field of concrete construction, it can be assumed that Hilti firestop systems have a service life (ageing resistance) of approximately 30 years from manufacturing date.

Please note that this expected long-term ageing resistance of Hilti firestop systems, which is given on the basis of the above-mentioned tests, depends on a number of factors on which Hilti basically has no influence (e.g. environmental factors such as extreme environmental conditions, e.g. chemicals, etc.) and, therefore, are subject to the following conditions which must be strictly observed by the user with regard to the respective Hilti firestop system:

- Strict adherence to the Hilti's operating, setting, installing and other technical instructions;
- Rigorous compliance with all other conditions set in the respective specifications during the lifetime of the Hilti firestop systems, in particular with regard to regular control and maintenance as well as to foreseeable use under normal climatic condition in the respective field of application.

CALIBRATION SERVICE

Verified accuracy. The check-up for Hilti measuring tools.

In spite of their ruggedness, Hilti measuring tools, like all precision instruments, may be negatively affected over time by everyday use under harsh jobsite conditions or by varying storage conditions and other external influences. Thanks to the Hilti Calibration Service, however, professionals in the construction business can always rely on their Hilti measuring tools.

Regular checks ensure that the tools continue to operate reliably in accordance with the applicable standards and statutory requirements. Hilti thus recommends annual calibration of every tool subject to normal use. If deficiencies are found, the tool will be readjusted to ensure that it functions as precisely and reliably as ever. Hilti guarantees this – in the form of a calibration certificate confirming that the tool meets specifications, and with a sticker showing the date of the most recent calibration.

PRECISION COMES AUTOMATICALLY

Thanks to an automatic reminder when the next calibration service is due, users can be sure that their Hilti measuring tools are checked professionally at regular intervals and that they comply with the specifications given in the operating instructions.

ANCHOR PULL-OUT TEST

Site safety is our first priority. Dedicated to ensuring proper anchor installation.

To ensure safe anchor installation, reliable building material and quality control on workmanship are of the same level of importance. Beside proper installation training to workers, on-site anchor test is a common way to verify their workmanship. To offer one-stop-shop service to customer, Hilti can refer anchor test service to customer, offered by an independent laboratory as described below.

HILTI (HONG KONG) LTD. - TESTING LABORATORY

This laboratory is accredited by HOKLAS (registration No. 157) for a specified range of anchor tests listed in the HOKLAS Directory of Accredited Laboratories.

ON-SITE ANCHOR TEST SERVICE

A certain percent of on-site pull-out test on installed anchor is required to verify the workmanship of installation. And different anchor types and sizes require different equipments for testing. For light- or medium-duty anchors, pull-out test can be carried out by simplest and handy tools, like DPG 100, Tester 4 or HAT 28. And for heavy-duty anchors or rebars, the test will be carried out by hydraulic jack. If recovery of the anchor deformation is concern, deformation test is also available for choice.
